

lux | mandate

Growth

Philosophy

lux | mandate is a core investment solution designed by a team of experts in asset management. Investment decisions are delegated to the Spuerkeess Asset Management's portfolio management team, acting as the investment advisor. This dedicated team of experts gives recommendations on assets' allocation and selection within the definite framework of the agreed investment strategy. The resulting portfolio is invested in accordance with a particular investor risk profile and ESG profile defined for each investor. Portfolio models are actively managed and diversified among major asset classes, geographies and currencies. The allocation choices are guided by the Global Asset Allocation Committee held on a monthly basis and composed of strategists and economists from Spuerkeess Asset Management. This target allocation is applied to the lux | mandate model portfolio to make sure clients' investments are always exposed efficiently and adapted to the current

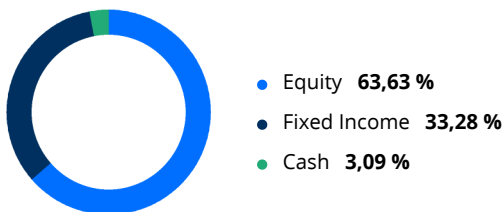

macroeconomic environment. All investments are made in internal funds and mainly through lux | funds. In other words, lux | mandate is an integrated investment solution that adapts to the investor regardless of their risk profile and ESG profile. lux | mandate provides access to an active management strategy that applies the market views of Spuerkeess Asset Management's asset management specialists and invests in a diverse range of in-house funds managed by Spuerkeess Asset Management.

Investment Policy

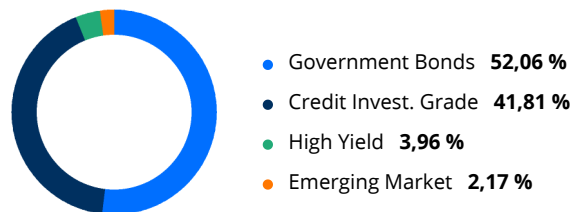

The Standard GROWTH strategy aims for long-term portfolio growth and high capital gains by accepting the risks associated with the stock markets. This strategy's assets are invested primarily in equities, bonds and/or money market UCI or in similar products and/or liquid funds. The strategy's anticipating average equity weighting is 60% over the long term, depending on market trends.
